

Yuri Okeren

East Gwillimbury, ON, Canada

365-737-0015 | yuri.dev44@outlook.com | github.com/yuriongit | linkedin.com/in/yuri-okeren

Software Engineer with 1+ year of experience building full-stack applications, with a focus on backend systems, APIs, and service architecture.

Skills

Languages: TypeScript, Go, Python, SQL, JavaScript

Technologies: Node.js, Bun, Express, FastAPI, React

Data & Infra: MongoDB, Redis, PostgreSQL, Supabase, Docker

Tooling: GitHub Actions, Vitest

Work Experience

Full-Stack Engineer Intern | Dravit – Remote, ON *Sep 2025 - Jun 2026*

- Built and shipped a Gemini-powered chatbot for client inquiries, reducing manual FAQ responses.
- Rebuilt a legacy static site in React/TypeScript, creating the codebase and integrating the chatbot for continued development.

Freelance Web Developer | Self-Employed – Remote, ON *Nov 2025 - Present*

- Delivers full-stack sites for small businesses, from requirements gathering through deployment.
- Partners directly with clients to align scope with business needs, avoiding late-stage rework.

Projects

Fantasy Basketball Platform | FastAPI, MongoDB, Redis, Cloudinary *Jun 2026 - Present*

- Built a multi-service fantasy sports platform integrating the Swar NBA API into a custom FastAPI service with background workers and caching.
- Designed paginated player and team endpoints to serve synchronized NBA data while reducing redundant API calls.
- Automated NBA data synchronization with Cloudinary assets referenced in MongoDB.

Internal PMS POC | React, TypeScript, Express, Supabase *Apr 2026*

- Built an internal product management system proof-of-concept for an embroidery business, replacing a manual and error-prone Google-Sheets system for tracking customer orders.
- Added Supabase Auth for access control and implemented order status, customer, and tracking management.

URL Shortener | TypeScript, React, Bun, Express, MongoDB, Redis *Jul 2026 - Present*

- Built a Bun/Express REST API and React frontend, sharing TypeScript types across the project.
- Implemented collision-safe 6-character aliases with retry logic and MongoDB unique constraints.
- Added caching and containerized development and deployment, with GitHub Actions for CI.

Education

Thompson Rivers University | B.Sc., Computing Science

Starting Fall Semester, 2026

Huron Heights Secondary School | O.S.S.D

Graduate
