

Yuri Okeren

East Gwillimbury, ON, Canada

365-737-0015 | yuri.dev44@outlook.com | github.com/yuriongit | linkedin.com/in/yuri-okeren/

Software Engineer with over a year of experience building full-stack applications, from API design through deployment, with a growing focus on backend systems and architecture.

Skills

Languages	TypeScript, Go, Python, SQL, JavaScript
Frameworks	Node.js, Bun, Express, FastAPI, React
Data & Infra	MongoDB, Redis, Supabase, Docker, Docker Compose
Tooling	Git/GitHub, GitHub Actions, Vim, Postman, Vitest/Pytest/Go testing

Work Experience

Full-Stack Engineer Intern, Dravit — Remote, ON **Sep, 2025 - June, 2026**

- Shipped a Gen-AI chatbot handling client inquiries end-to-end, cutting manual intake work.
- Rebuilt a legacy static site in React/TypeScript and integrated the chatbot, boosting maintainability.

Freelance Web Development, Self-Employed — Remote, ON **Nov, 2025 - Present**

- Deliver full-stack sites for small businesses, owning each process from requirements to deployment.
- Partner directly with clients to align scope with business needs, avoiding late-stage rework.

Projects

Fantasy Basketball Platform — Python, FastAPI, MongoDB, Redis, Cloudinary **June 2026 - Present**

- Architected a multi-service fantasy sports platform, defining service boundaries, caching, and data ownership before implementation.
- Built a paginated FastAPI service for player and team data, with a caching layer that cut redundant API calls and improved response times.
- Added background workers to sync live NBA data and integrated Cloudinary-backed asset storage referenced through MongoDB.

Distributed Load Tester — Go, Docker, PowerShell 7 **April 2026 - Present**

- Built a distributed HTTP load testing framework over a custom TCP protocol, supporting up to 500k+ req/s through concurrent worker orchestration.
- Implemented worker registration, health monitoring, result aggregation, and semaphore-based concurrency control for reliable high-load execution.

URL Shortener — TypeScript, Express, MongoDB, Docker, GitHub Actions **July 2026 – Present**

- Built a URL-shortening REST API with collision-safe, cryptographically random key generation.
- Built a SvelteKit frontend, validating input on both client and API with shared types throughout.
- Containerized with Docker Compose and set up GitHub Actions to run tests and builds on push.

Education

Thompson Rivers University — B.Sc., Computing Science **Starting Fall Semester, 2026**

Huron Heights Secondary School — O.S.S.D **Graduated June, 2026**
